

DB16**Display Blade style, 6-digit, 50 mm, LED dot matrix**

To help customers' orientation counter displays are mounted above or beside the counter. Optionally stainless steel tube (OB01-C04) can be used to fix it onto the table or on the ceiling.

The display consists of six digits (50 mm, 5 x 7 LED dot matrix); their colour is bright white, but it can be covered with colour foil (blue, red, green etc..) to create an extra light effect.

At calling event, the ticket number with 4 digits (A123 or 1234 type) is blinking for adjustable time period (and blinking speed) on the display and the 2-digit counter number is blinking too if it is configured as waiting area display, or the same will not blink if it is configured as counter display.

The number is shown on the display until the teller presses the STOP/CLOSE button of the calling unit.

The DB16 display can swap between Arabic and English numbers, the swapping time can be adjusted in the Q-net Pro main software.

The DB16 display is available for Q-net Pro systems.
