

OE03**Call signal speaker**

As it is known Q-net Pro is offering call signal / voice call via the sound card of any PC within the branch on which the device controller software is installed.

Q-net Basic Plus and Basic are using the built-in buzzer in the Dx05 57-mm waiting area display.

However if, Basic Plus and Basic are using 100-mm-digit waiting area display (Dx55 or higher), no call signal possibility was available. Therefore we have created OE03, which is the same 3 sequential buzzer in a Q-net designed housing, like in Dx05, that can be connected to the distributor of Q-net, using the same UTP cable.

The volume of the speaker can be changed.

Dimensions:**Height: 60 mm****Width: 100 mm****Depth: 25 mm****Power requirement: 12V, 1A**www.q-net.cominfo@q-net.com
