

PC14-H07**Mini PC in plastic box**

We are using the RockPi single board computer for several purposes in our products.

We offer the same product in a plastic box (-H07) in order to be used as the dedicated mini PC on which the web-based SH46 media display software module is running (See more details here: <https://q-net.com/en/q-net-media-player-software-pro-sh46/>).

This unit works with our Linux based operation system and a browser that is displaying the SH46 module.

The PC14-H07 unit should be connected with a big TV or monitor of any size using HDMI cable. This way the calling sound/voice files can be heard in the loudspeakers of the TV.

This set is the most up-to-date way to show several video and other content and calling info of a queue management system at the same time.
